In reference to: Docket # 98N-1038

To the Federal Drug Administration -

It is imperative that foods which are exposed to radiation, in an effort to "pasteurize" them, be labeled.

Our family has determined that we do not wish to eat irradiated food. We have several reasons for this. We choose to eat food, in as much as possible, that is less processed and more natural. Irradiated food does not fit our standards.

Also we are concerned that the false promise of irradiation will mean that irradiated food is dirtier.

Additionally communities where irradiation plants are sited will be at risk to exposure.

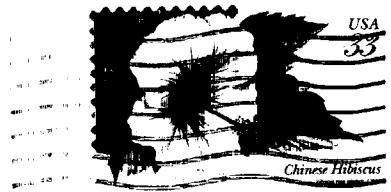

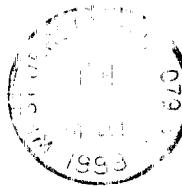

LABEL Irradiated Food!

Very truly yours
Margaret Buettner
